The stations in the Modular Production System at a glance

A production line in a factory can be made up of individual production cells. Each cell has a specific function in the process (distribution, testing, processing, handling, assembly, storage). You can select an application or process that meets your requirements from a range of individual stations.

By effectively combining individual stations, you can assemble your production system.

Learn about the functions and training aims of the individual stations as well as their possible combinations on the following pages.
Testing station
Processing station
Handling station, pneumatic
Handling station, electrical
Assembly station
Punching station
Sorting station
Sorting station – Profibus DP
Separating station
Storing station
